Approved For Release 2002/06/25 : 514 Roll 66B00560R000100110039-1

4 September 1963

MEMORANDUM

I would like the following information for discussion with the President's Board:

- l. Comparison of the total possible coverage expressed in total square miles of a mission of, say, 4 days' duration of CORONA M, J, LANYARD,
- 2. What would be the increased coverage accomplished by CORONA J with failures and successful missions as compared with CORONA M?
- 3. What is the total number of successful missions this year, the number of failures and the coverage of each of useable photography?
- 4. What is the total coverage of useable photography of the Soviet Union in square miles and Communist China in square miles in this year's missions?
- 5. What percentage of land mass of each country was covered by useable photography?
- 6. What particular areas of special interest in the Soviet Union have been missed this year because of weather or other reasons?

 Mr. McNamera and I assume that the extreme north and east are of less interest than the west and the area south of the 65th parallel.
- 7. Have we seen all of the ICBM sites this year or have some been obscured. Have we located new complexes? Have any additional launches been located at existing locations?
 - 8. Ditto for the MRBM sites.
- 9. Observations of special interest at Tyura Tam, Kaputsin Yar and Sary Shagan.

JOHN A. McCONE Director
